Applied Data Management

Enhanced Value through Applied Analysis

Overview

Facility management, emergency preparedness and response, regulatory reporting, and records management and retention — just a few of the crucial data management issues facing Oil and Gas companies. Most, if not all, Oil and Gas companies have internal solutions in place to address such issues, however, most of these tend to be silo-based approaches with no regard for integration with other systems or processes within the company.

Applied Data Management is pertinent, relevant, and put into practice for a particular purpose. In an Oil and Gas context, it is data management that focuses on supporting the ongoing production and operation of fields and facilities; including the need to maintain company practices and comply with regulatory requirements.

Implementation

The value of an Applied Data Management system is found through integration across disciplines of data and information. Our experience has shown that even tightly-tuned business processes can benefit from cross-discipline integration and will result in improved repeatability, lower data management costs, enhanced quality and consistency, and better communication and understanding throughout the workflow process.

Experience and Expertise

Bridging the Gap between business needs and technology solutions
Improving Processes through unbiased examination
Applying Principles of systems design, development, and integration
Developing Standards to ensure a solid system foundation
Establishing Value of data and information management systems
Integrating Businesses at the data and application levels
Managing Change during process and system implementation
Transferring Knowledge to allow our clients to become self-sufficient

Our continued consulting with the world's largest integrated petroleum companies has allowed us to implement internationally while maintaining perspective on the locale; the kind of perspective that is needed to meet the nuances of both global and local regulatory and operating environments.

Realizing Results

Our business process approach has realized as much as *twenty times reduction* in data management redundancy. Such results are accomplished through assessment of existing workflows, personnel, and toolkits with the objective of streamlining commonalities, assigning ownership, and applying appropriate levels of mature technology.

Put our team to work for you! Our diverse suite of solutions is focused on establishing and enhancing the true value of GIS and applied data management in your organization.
